DOCK ONE SOLUTIONS

New features guide

What's new in the Dock One admin and website, and how to use each part, step by step. Written for the shop team; no technical knowledge needed.

Admin: dockonesolutions.com/admin

October 2026

What's new at a glance

Everything below is already live. Open the admin at **dockonesolutions.com/admin** and sign in. The new sections appear in the menu on the left.

	Feature	Where to find it
1	**Staff accounts**: give each staff member their own sign-in and choose what they can see or change	Settings → **Staff**
2	**Quotations**: make quotations with their own numbers, design and terms, then turn them into invoices	Commerce → **Quotations**
3	**Invoices**: inventory products only, one numbering for website and shop, safer voiding	Commerce → **Invoices**
4	**Receipts**: every payment gets its own receipt number; cash, card, cheque and bank transfer; part payments and credit	Commerce → **Receipts**
5	**Reports**: invoiced sales (website, in-store or both), payment breakdown, inventory value and stock movement	Commerce → **Reports**
6	**Suppliers**: supplier details and which month goods came in	Catalogue → **Suppliers**
7	**Warranty**: supplier and customer warranty for every serial number	Catalogue → **Warranty**
8	**Website**: customers request a quotation and download it as a PDF; new hotline number; "people viewing" note	dockonesolutions.com
9	**Automatic extras**: thank-you emails after a sale; images kept light so the site stays fast	Nothing to do

Coming later: text messages (SMS)

Thank-you and order messages by SMS will be added once you have set up an SMS provider and shared its details with us. The thank-you *email* already works.

Good to know

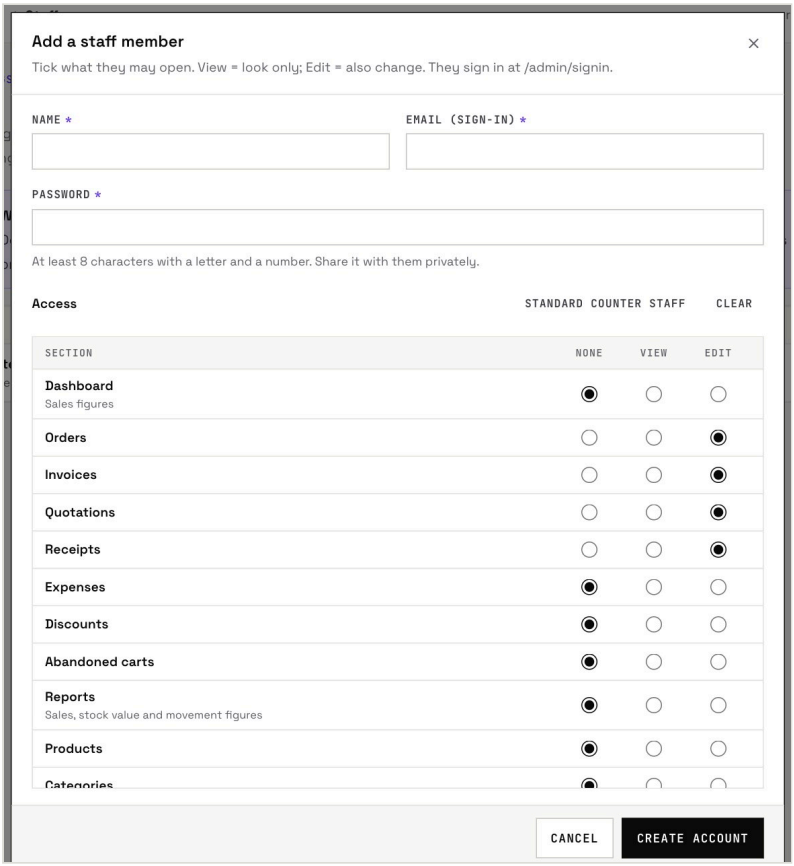

The admin saves as you type. If you are ever unsure what a button does, nothing is deleted without a clear confirmation first, and staff can never delete anything.

1 Staff accounts

Each staff member gets their own email and password. For every section of the admin you decide whether they see nothing, can only look, or can make changes. Only the owner's account can do this.

Add a staff member

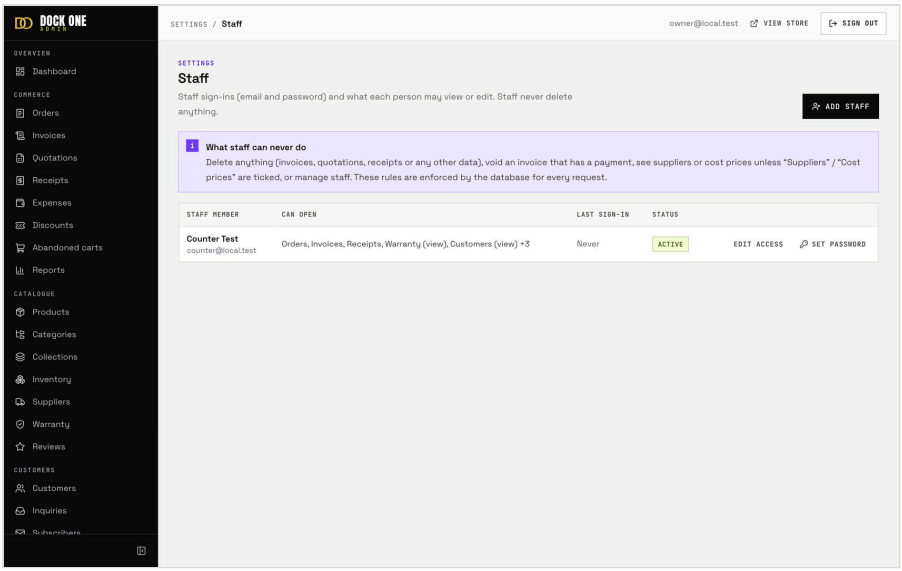

1. In the left menu, under Settings, click **Staff**, then **Add staff**.
2. Type their **name**, the **email** they will sign in with, and a **password** (at least 8 characters, with a letter and a number).
3. Under **Access**, choose for each section: **None** (hidden), **View** (look only) or **Edit** (look and change). **Standard counter staff** ticks the usual set for shop staff in one click.
4. Click **Create account**. Give them the email and password privately. They sign in at **dockonesolutions.com/admin/signin**.

Adding a staff member: one row per section, with None / View / Edit.

Change access, reset a password, or switch someone off

- **Edit access**: change their sections at any time. To block sign-in straight away (for example when someone leaves), turn off **Account active**.
- **Set password**: give them a new password if they forget it.

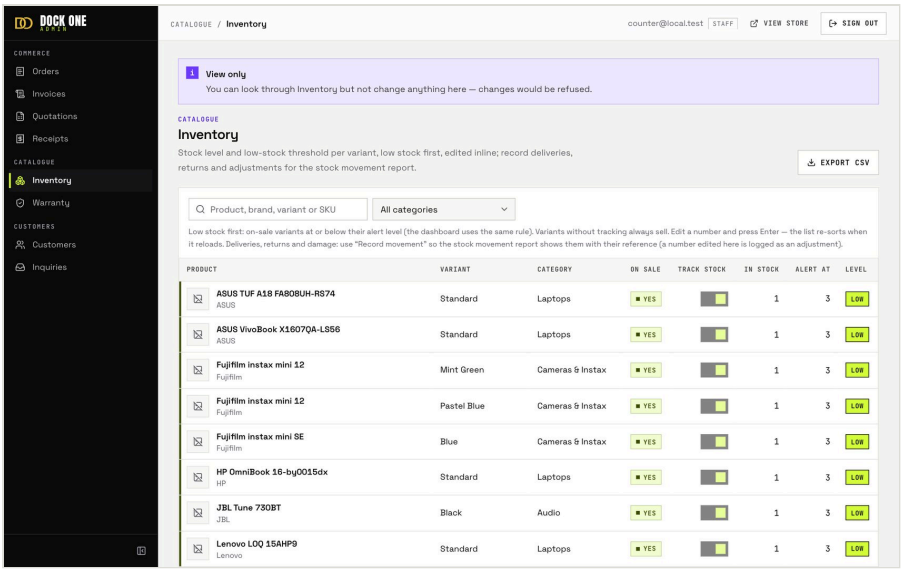

The Staff page lists each person, what they can open, and when they last signed in.

What staff can and can't do

Staff CAN (if given the section)	Staff can NEVER
• Create and issue quotations and invoices • Turn a valid quotation into an invoice • Record payments and print receipts • Look at Inventory (stock levels) without changing it • Look up warranty by serial number	• Delete anything: invoices, quotations, receipts or any other record • Void an invoice once a payment or receipt is linked to it • See suppliers or cost prices, unless you tick **Suppliers** or **Cost prices** • See financial reports, unless you tick **Reports** • Add or edit products or stock, unless you give them **Edit** • Manage staff accounts

---

> **These rules are enforced by the system itself**
> , not just hidden on the screen, so staff can't get around them.

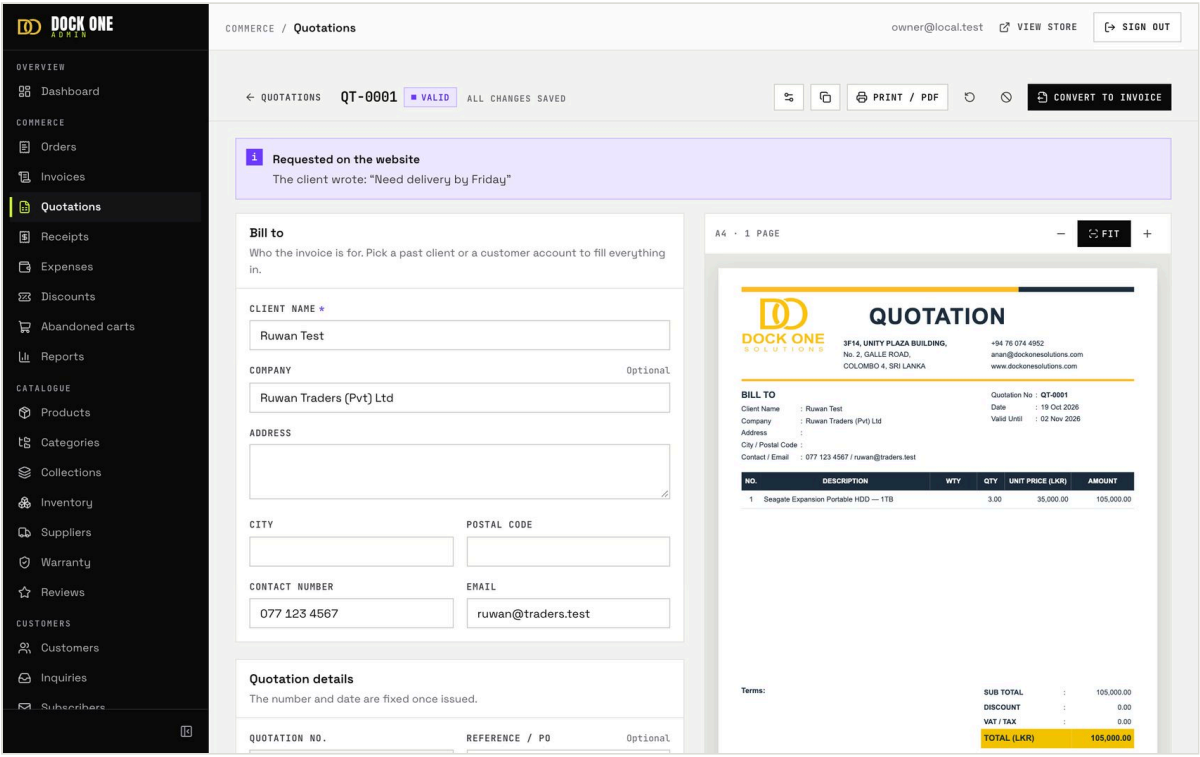

What a staff member sees: a shorter menu with only their sections, and a "View only" note where they can look but not change.

2 Quotations

Quotations look like your invoices but carry the heading **QUOTATION**, their own numbers (QT-0001, QT-0002…), a "valid until" date and your quotation terms. They don't move stock or record money.

Make a quotation

1. Click **Quotations** in the menu, then **New quotation**.
2. Fill in the client (name, company, contact details). Add items by searching the inventory, or click **Add custom line** for something you don't stock yet (e.g. a special order).
3. Check the **Valid until** date (14 days by default) and the terms at the bottom.
4. Click **Issue quotation**. It gets its number. Use **Print / PDF** to print it or save it as a PDF to send.

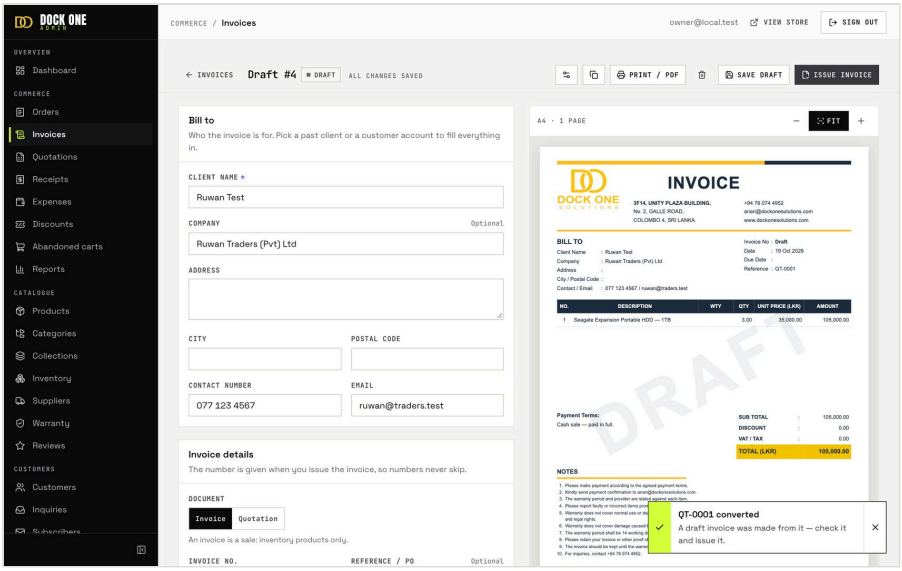

The quotation editor: details on the left, the finished document on the right. This one came from the website, so it shows the client's note at the top.

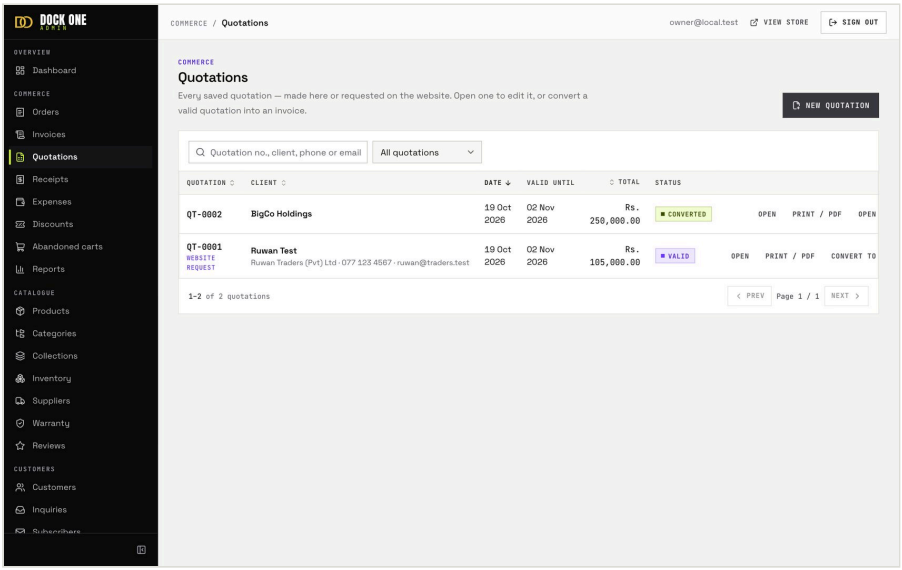

> **Drafts can switch**
>
> While a document is still a draft, the **Document** switch (**Invoice** / **Quotation**) changes it from one to the other. Drafts are kept until you issue or delete them.

Turn a quotation into an invoice

1. Open the quotation (it must still be within its "valid until" date) and click **Convert to invoice**.
2. If the quotation has custom lines (items not in the inventory), the owner is asked to **match each one to a real inventory product**, because invoices only sell stocked items.
3. A **draft invoice** opens with the same client, items and prices, and the quotation number as its reference. Check it and click **Issue invoice**.

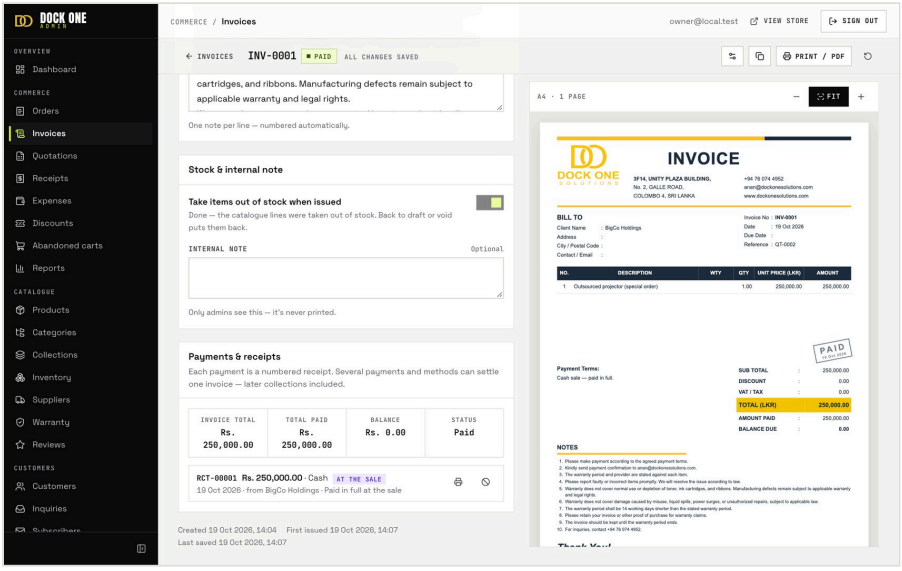

After converting: the new draft invoice opens, with the quotation number (QT-0001) as its reference.

The Quotations list shows each quotation's status: **Valid**, Expired, **Converted** or Void. Requests from the website are marked "Website request".

3 Invoices: what changed

- **Inventory products only.** An invoice can only contain products from your inventory, with the right variant (colour, size, etc.). For anything else, make a quotation first.
- **One numbering for everything.** Shop sales and website orders share the same INV- numbers. A website order gets its invoice automatically when it is handed over to the customer. These are marked *Website sale* in the list.
- **Payments are receipts.** Each payment on an invoice gets its own receipt number (see section 4). The invoice shows **Total, Paid, Balance and Status**.
- **Voiding is safer.** You must type a reason, and an invoice that already has a payment or receipt can't be voided. Voided invoices are kept with their number and reason; nothing is deleted.
- **Thank-you email.** When you issue an invoice for a client with an email address, they automatically get a thank-you email with a link to the website (once per invoice).

The "Payments & receipts" box on an invoice: total, paid, balance and status, each receipt with its number, and the buttons **Use a receipt** and **Record payment**.

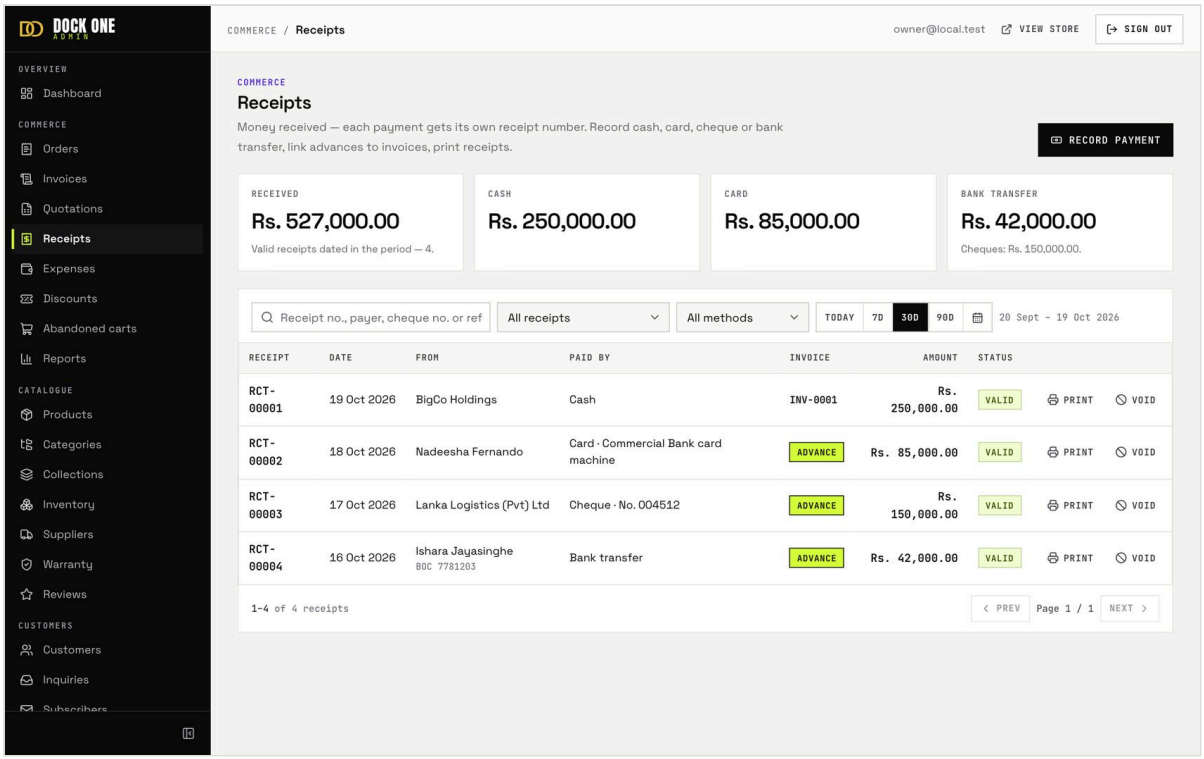

- **Invoices for website orders** (from an order's "Create invoice") never take stock again, and their payment comes from the order: when you mark the order paid in Orders, the receipt appears on the invoice. One order can only have one issued invoice.

Credit sales and part payments

1. Issue the invoice as normal. If the customer pays later or in parts, the balance stays open and the status shows **Unpaid** or **Part paid**.
2. Each time money comes in, open the invoice and click **Record payment**, or record it in the Receipts page and link it.
3. When the balance reaches zero, the invoice shows **Paid**.

4 Receipts

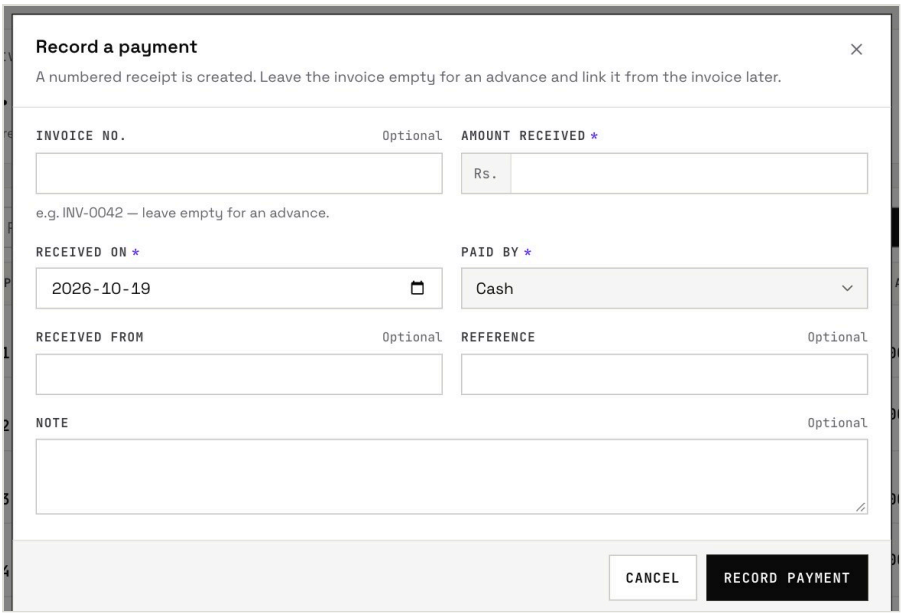

Every payment you receive gets a unique receipt number (RCT-00001, RCT-00002…). Receipts are never deleted, so the numbers never skip.

The Receipts page: totals by method at the top, then every receipt with who paid, how, and which invoice it belongs to. "Advance" means money received before an invoice exists.

Record a payment

1. Click **Receipts** in the menu, then **Record payment**. (Or use the same button on an invoice.)
2. Enter the **invoice number**, or leave it empty for an **advance** payment you'll link later.
3. Enter the amount and date, and choose **Paid by**:
   - **Cash**
   - **Card**: also choose *Received into* (which card machine or account)
   - **Cheque**: also enter the *Cheque number*
   - **Bank transfer**: add the bank reference
4. Click **Record payment**. Use **Print** on the receipt row to give the customer a printed receipt.

Recording a payment.

Advance payments and pre-orders

Record the deposit here with no invoice number (it shows as *Advance*). When you make the invoice, its **Advance payments** box has **Use a receipt**: pick the customer's receipt (theirs are listed first). When you issue the invoice, only the rest is collected; the advance is never counted twice. You can also use **Link to invoice** on the receipt's row here. A receipt linked by mistake can be unlinked (on an issued invoice, by the owner).

Mistakes

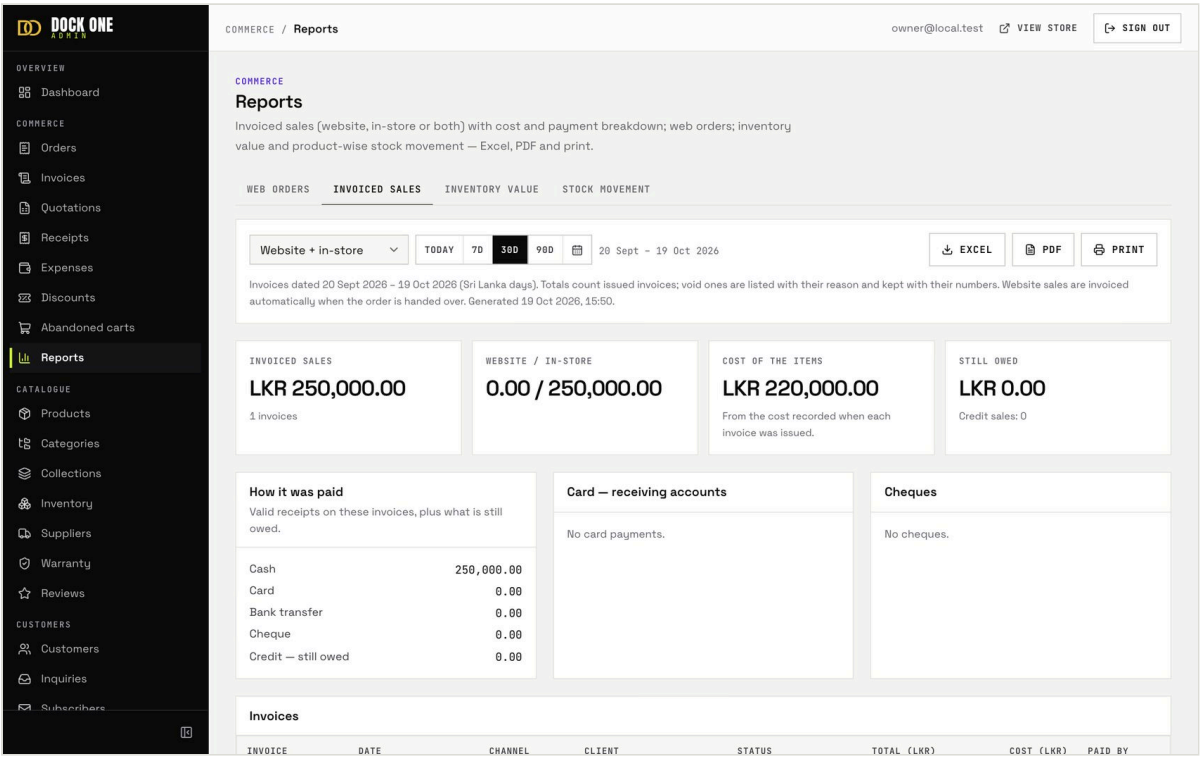

Only the owner can void a receipt, and must give a reason. The receipt stays in the list marked Void, so the record is complete.

5 Reports

Click **Reports** in the menu. The tabs at the top switch between reports. Every report can be saved as **Excel** or **PDF**, or printed, using the buttons on the right.

Invoiced sales

- Choose **Website**, **In-store** or **Website + in-store**, and the date range.
- Shows total sales, the **cost of the items** sold, and what is still owed on credit.
- **How it was paid**: cash, card, bank transfer, cheque and credit. Card payments are listed by receiving account, cheques by cheque number.
- The invoice list includes **voided invoices with their reasons**.

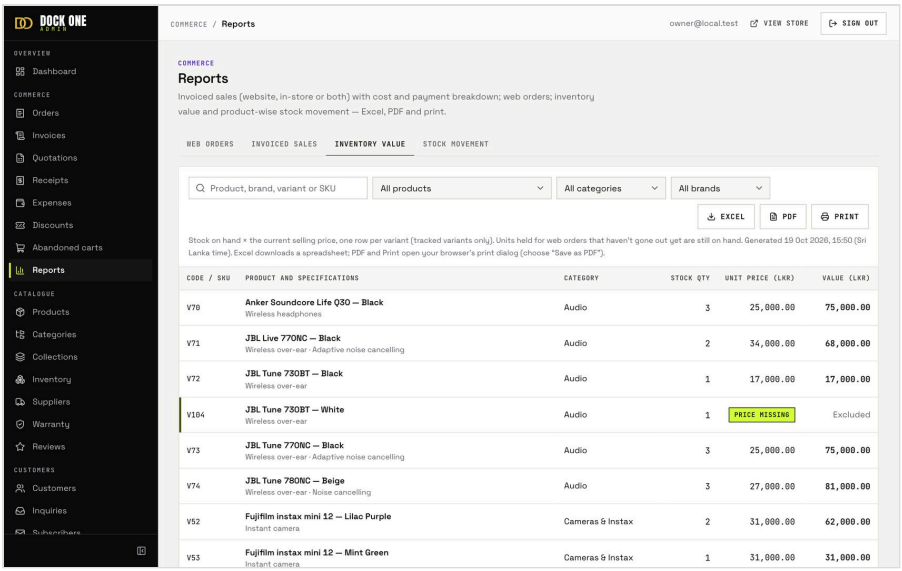

Invoiced sales report.

> **Cost information is private**
> Staff only see cost figures if you tick **Cost prices** for them, and only see Reports if you tick **Reports**.

Inventory value

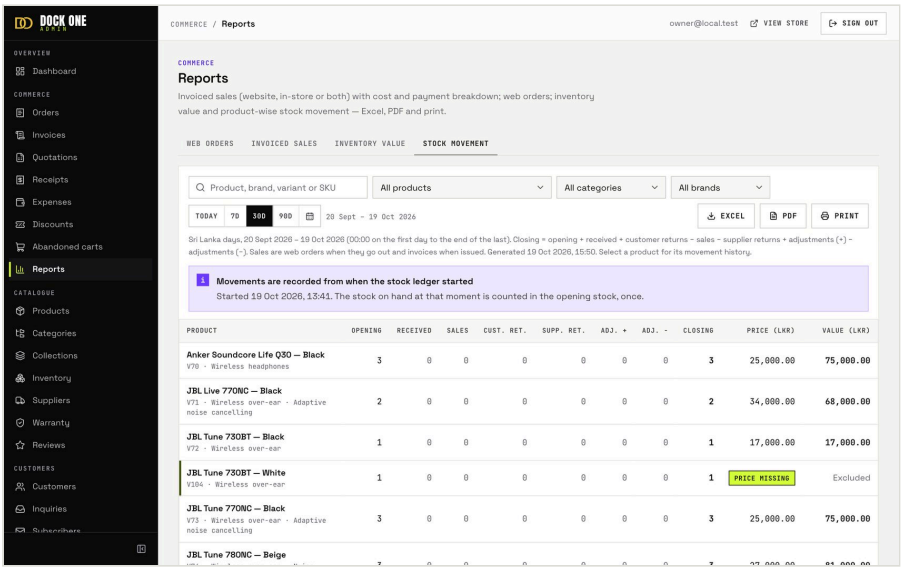

What your stock is worth right now: every product with its stock count, selling price and total value. Filter by category or brand.

Inventory value report.

Stock movement

For each product over the chosen dates: opening stock, stock received, sales, returns, adjustments and closing stock.

Stock movement report.

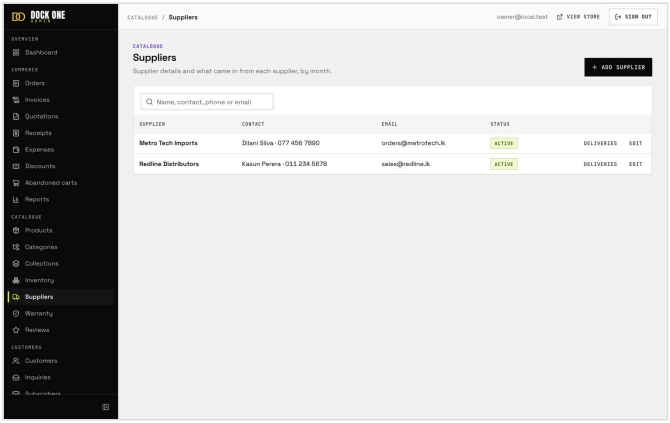

6 Suppliers and stock received

Add a supplier

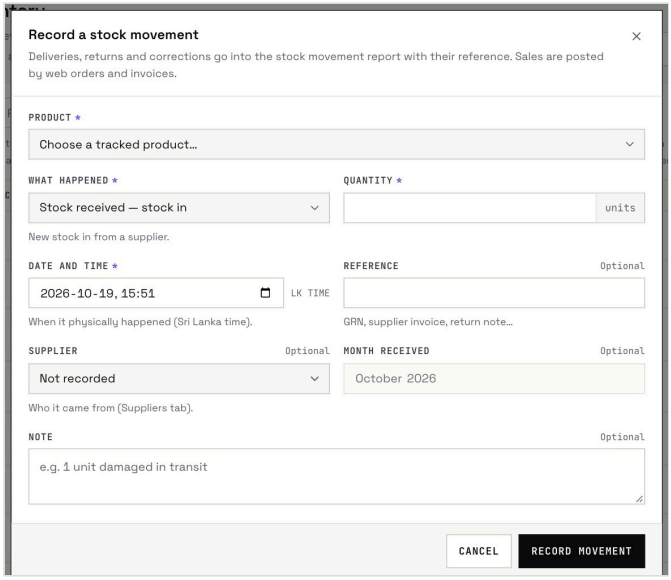

1. Click **Suppliers** in the menu, then **Add supplier**.
2. Enter the name, contact person, phone, email, address and any notes. Save.
3. **Deliveries** on a supplier's row shows everything received from them, by month.

Record goods received

1. Click **Inventory**, then **Record movement**.
2. Choose the product and set **What happened** to *Stock received*. Enter the quantity.
3. Choose the **Supplier** and the **Month received**. You can also tick the serial numbers that came in and enter the supplier's warranty for them.
4. Click **Record movement**. Stock goes up, and the movement appears in the Stock movement report.

The Suppliers page.

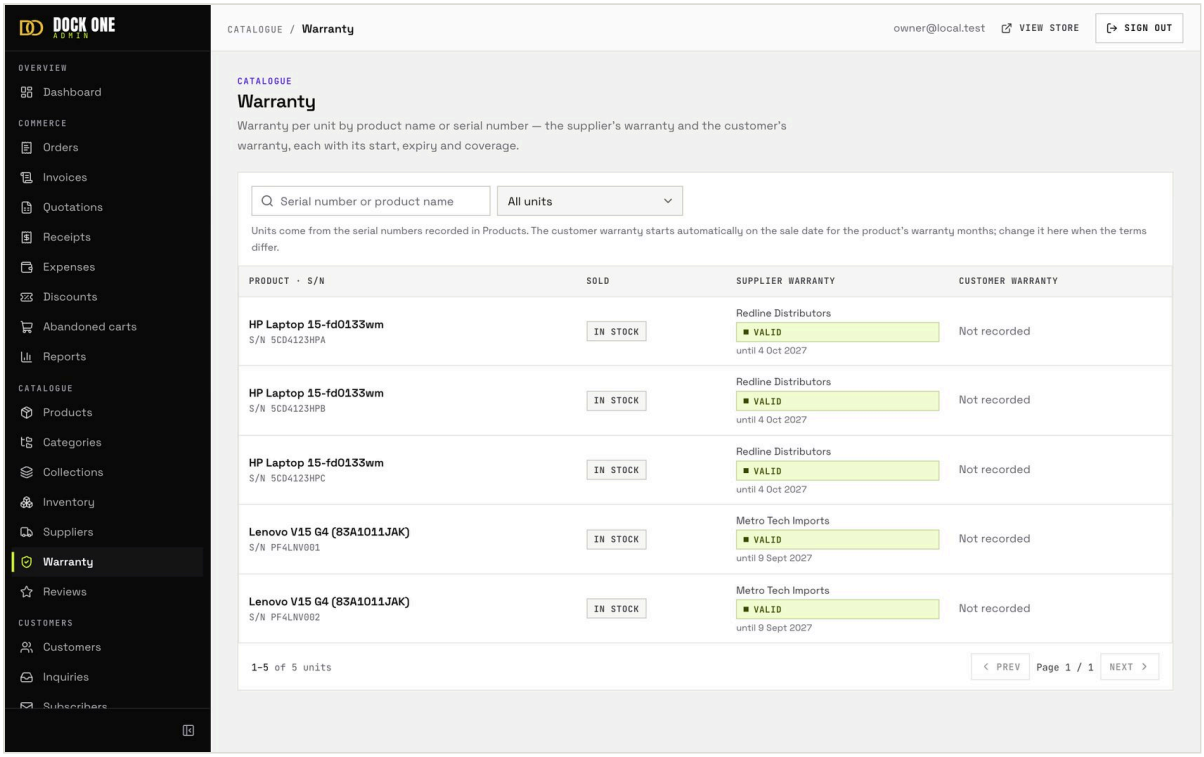

Recording a delivery with its supplier and month.

7 Warranty

Every item with a serial number has two warranties side by side: the **supplier's warranty** (what the supplier covers for you) and the **customer's warranty** (what you cover for the buyer).

1. Click **Warranty** in the menu. Type a **serial number** or product name in the search box.
2. Each unit shows whether it is in stock or sold, and whether each warranty is **Valid** or expired, with the end date.
3. Click a unit to see or edit its warranty: supplier, month received, start, expiry and what is covered.

The Warranty page: one row per serial number.

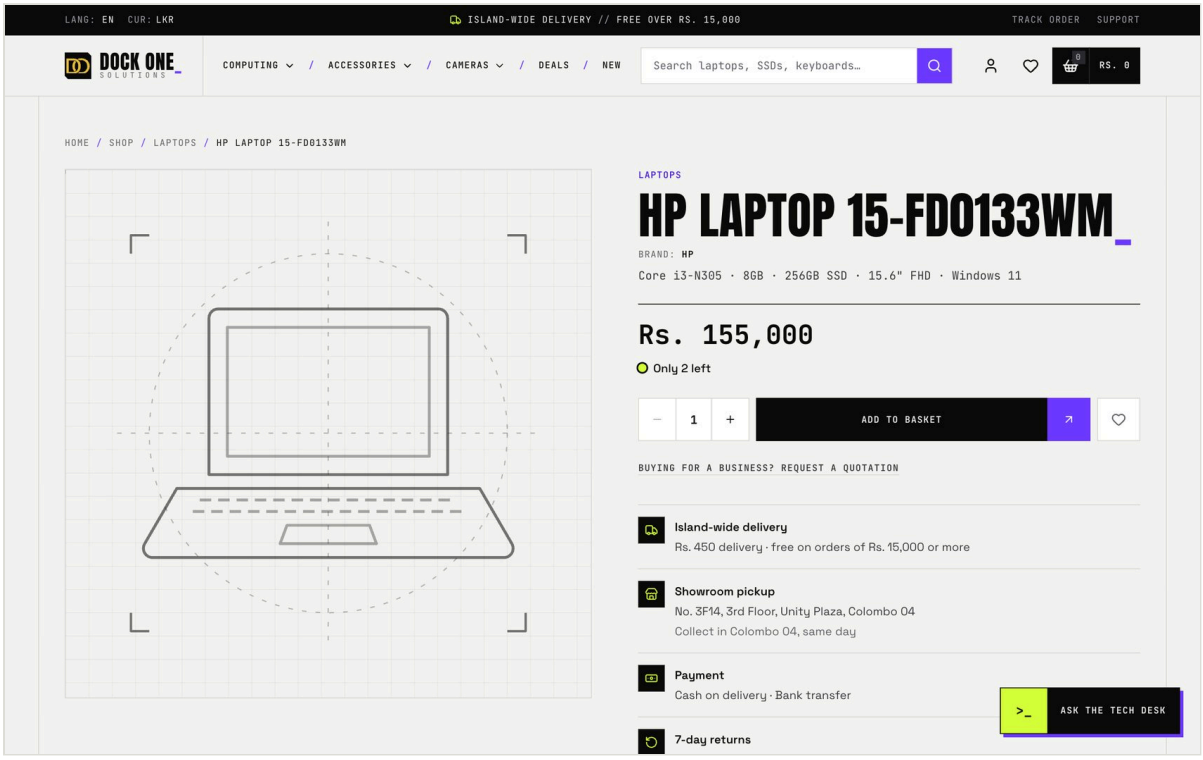

> **The customer warranty fills itself in**
>
> When a unit is sold, its customer warranty starts on the sale date, using the product's warranty period. If the sale is undone, it is cleared again.

Use the **Show** filter to list, for example, every unit whose supplier warranty has expired. That makes it easy to check, before sending something for repair, whether the supplier still covers it.

8 On the website

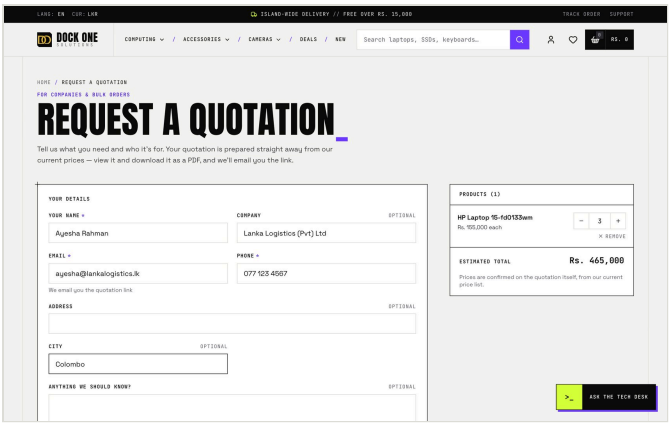

Customers can request a quotation

Companies often need a formal quotation before they can buy. On every product page there is now a **"Buying for a business? Request a quotation"** link, and the basket has a **Request a quotation** link too.

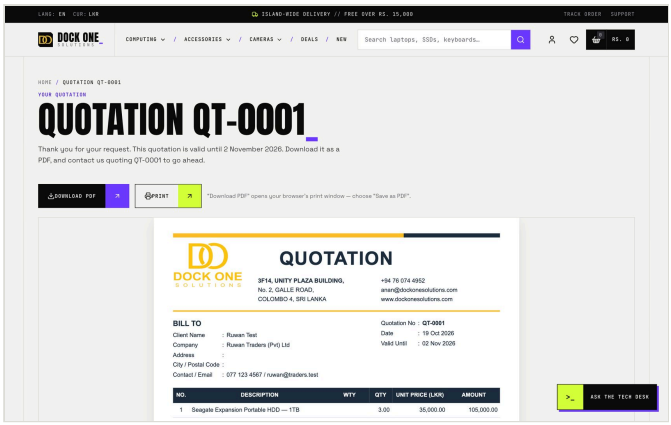

The quotation link under "Add to basket". The product page also shows "1 other person is looking at this right now" when someone else is viewing the same product.

1. The customer enters their name, company, email and phone, and can change quantities.
2. The quotation is created **instantly** from your current prices, with a QT- number, in the same design as your printed quotations.
3. They can **download it as a PDF** straight away, and they get an email with the link. You get an email alert too.
4. It appears in your **Quotations** list marked *Website request*, ready to follow up and convert into an invoice.

The request form.

The customer's quotation, ready to download.

Hotline number

The website now shows the hotline **+94 71 096 0006** everywhere a phone number appears (top bar, footer, contact page, checkout and emails). WhatsApp stays on its own number. You can change either in **Store settings** → Contact.

"People viewing" note

When more than one person has the same product open, the product page says how many others are looking at it. It is a real count of visitors at that moment; no personal details are stored.

9 Things that happen automatically

What	What it means for you
Thank-you email	Sent to the client when you issue an invoice that has their email address. It includes a link to the website. Sent once per invoice.
Website order invoices	When a website order is handed over, its invoice (and receipt, if paid) is created with the next invoice number.
Image tidy-up	When the owner opens the admin, the system checks once a day for very large product images and replaces them with lighter copies of exactly the same picture and size. This keeps the website fast and within the hosting plan. A small note in the corner shows progress; just keep the admin open for a few minutes. There is nothing to set up.
Customer warranty	Starts automatically on the day a serial-numbered unit is sold.
One customer record	A customer's page (Customers) shows their web orders *and* their shop and website invoices and quotations, with what they still owe.
Dashboard	Next to the web-order figures, the dashboard shows **Invoiced sales** for the same days: shop and website together.
Refunds	Marking a web order refunded voids its invoice and receipt, so it no longer counts as a sale or as money owed.

Quick answers

Question	Answer
A staff member can't see a section they need.	Owner: Staff → **Edit access** on their row, set the section to View or Edit, and save. They may need to refresh the page.
A staff member left the company.	Staff → **Edit access** → turn off **Account active**. They can't sign in from that moment.
I can't add an item to an invoice.	Invoices only take inventory products. Add the product in Products first, or make a quotation with a custom line.
The "Void" button is missing on an invoice.	It has a payment linked. The owner can void that receipt first (with a reason), then void the invoice.
A quotation can't be converted.	It may be past its "valid until" date, or already converted. Open it and use the **Duplicate** button (two-squares icon) at the top to make a fresh copy at today's prices.
A customer paid before the invoice was made.	Record it in Receipts with no invoice number (an advance). Later, on the invoice, click **Use a receipt**.
Where are cost prices and suppliers for staff?	Hidden unless the owner ticks **Cost prices** or **Suppliers** for that person.
How do I save a report?	Use **Excel**, **PDF** or **Print** at the top right of the report. "PDF" opens the print window: choose **Save as PDF**.
